DETAILED OFFICE ACTION

1. Claims 1-27,30-36 are pending in the Application. Applicant has cancelled claims 28-29 and added new claims 35-36

Election/Restriction

2. Applicant's election with traverse of group I drawn to a magnetic memory element and Species E reads on fig 1F in the communication with the Office on 3/7/2006 is acknowledged.

Because Applicant did not distinctly and specifically point out the supposed error in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Applicants have the right to file a divisional, continuation or continuation-in-part application covering the subject matter of the non-elected claims.

The traversal is on the ground(s) that see the election paper. This is not found persuasive for the following reasons :

For Species Election .As discussed in the previous action the examiner already point out the different species with different patentable feature illustrated by the different figures and with 8 different species with different technical features it will be burdensome for the Office

The requirement is still deemed proper and is therefore made FINAL and therefore non-elected group II inventions and non-elected species are withdrawn from consideration.

Application/Control Number: 10/715,376 Page 3

Art Unit: 2818

Since the Applicant fails to provide all the claims that belong the species E and that read on Fig 1F, the Examiner will try the identify those claims that belong to this species as best as it can be understood by the Examiner.

- 3. Upon review of all the claims and the species the Examiner identifies Species E (fig 1F) includes claim 12 with claim 1 and 8 as generic claims.
- 4. new found references necessitate new ground of rejections for claims 1,8, and 12

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of U.S.C. 103(a) which form the basis for all obviousness rejections set forth in this office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

 Patentability shall not be negatived by the manner in which the invention was made.
- 6. The Examiner noted that claim 1 has some limitation recited in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See In re Hirao, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and

Application/Control Number: 10/715,376

Art Unit: 2818

Kropa v. Robie, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

7. Claim 1,8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daughton et al. (US patent 6,744,086) in view of Chen et al. (US patent 5,917,747).

With regard to claim 1, Daughton discloses (in the abstract, fig 4, fig 12, column 7 line 25-32, column 8 lines 5-10, column 9 line 55-62) a spin-current switched magnetic memory element, comprising: a plurality of magnetic layers, at least one of said plurality of magnetic layers having magnetic anisotropy component and comprising a current-switchable magnetic moment; and at least one barrier layer (fig 4, layer 5, column 4 line 25-26) formed adjacent to said plurality of magnetic layers.

Missing in the Daughton disclosure is the magnetic anisotropy of the magnetic layers is perpendicular.

Chen, however disclose a magnetic memory cell wherein the magnetic anisotropy of the magnetic layer is perpendicular. (see Chen reference column 2 line 40-44, column 4 line 40)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate this feature as taught by Chen into the device by Daughton and come up with the invention of claim 1.

The rationale is as the following:

A person skilled in the art at the times the invention was made would have been motivated to improve the device by Daughton by making it to consume less power in both read and writing mode as suggested by Chen in column 2 lines 4-16.

Art Unit: 2818

With regard to claim 8, Daughton (in fig 3 fig, 4) discloses a magnetic memory element comprising: first and second leads (fig 3 layer 3 and 9, fig 4 layer 24 and 27); and a pillar formed between said first and second leads, said pillar including said at least one barrier layer (fig 3 layer 5, fig 4 layer 15) and at least one magnetic layer of said plurality of magnetic layers.

The rationale as why claim 8 is obvious over Daughton in view of Chen has been set forth in the rejection of claim 1.

7. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Daughton et al. (US patent 6,744,086) in view of Chen et al. (US patent 5,917,747) and in further view of Nakada et al. (US patent 6,341,053).

With regard to claim 1, as set forth in the rejection of claim 1, the device named device of Daughton in view of Chen, disclose all the invention except for a lead or electrode that includes a magnetic layer. Nakada, however, (in fig 1,column 4 line 58-65) discloses a lead (layer 12) that can include a magnetic layer 13.

It would have been obvious to one of ordinary skill in the art the time the invention was made to incorporate a lead layer (layer 12) that can includes a magnetic layer as taught by Nakada into the Daughton in view of Chen device and come up with the invention of claim 12 of the present Application.

The rationale is as the following:

A person skilled in the art at the time the invention was made would have been motivated to reduce the signal to noise ratio of the Daughton in view of Chen device as suggested by Nakada (See Nakada reference column 2 lines 14-15).

Application/Control Number: 10/715,376

Art Unit: 2818

Page 6

8. When responding to the office action, Applicants are advised to provide the examiner with the line numbers and the page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

9. A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) day from the day of this letter. Failure to respond within the period for response will cause the application to be abandoned (see M.P.E.P. 710.02(b)).

CONCLUSION

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thinh T Nguyen whose telephone number is 571-272-1790. The examiner can normally be reached on Monday-Friday 9:30am-6: 30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Smith Matthews can be reached at 571-272-1907.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval [PAIR] system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
